NOVAMED

Solaticare

Maximum care and comfort without compromise

Solaticare is an automatic patient-controlled device for partially or totally incontinent patients and for partially or totally immobile patients or elderly people. The Solaticare system automatically collects faeces and urine from the patient and flushes the waste into a hermetically sealed unit. It then cleans and dries the patient with warm water and warm air.

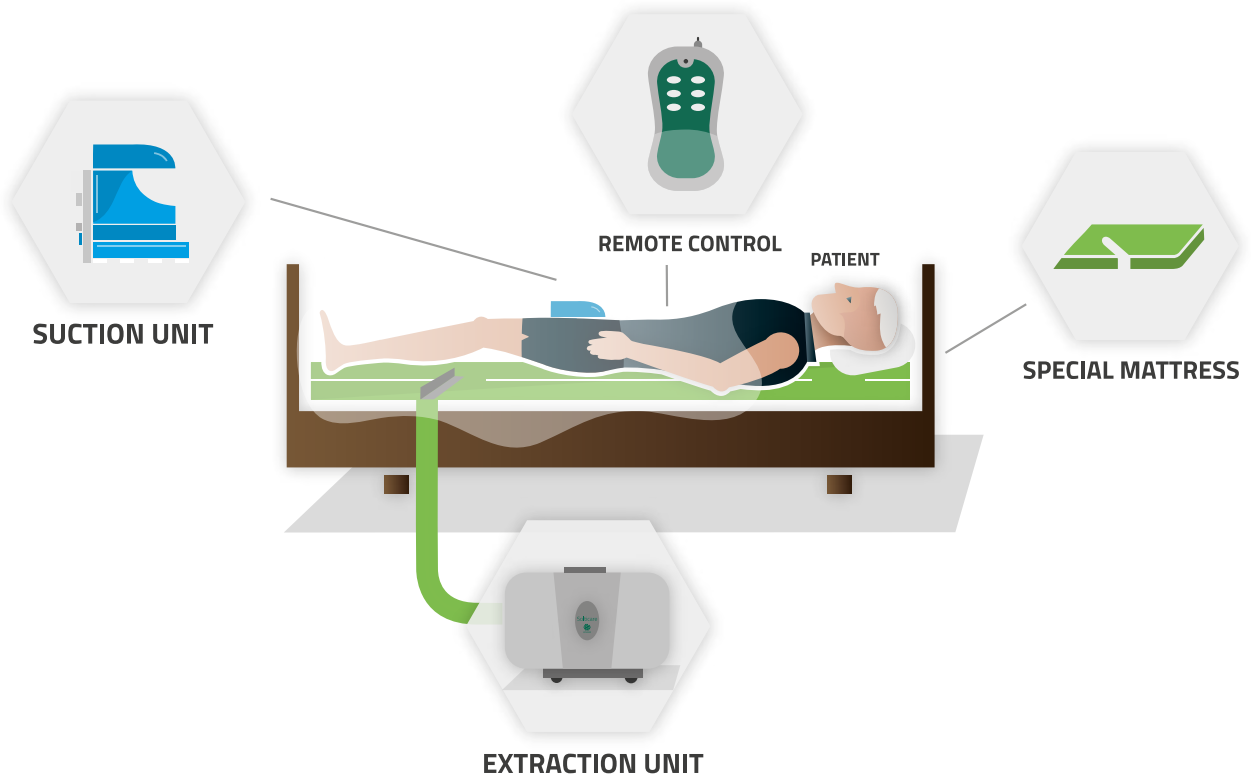

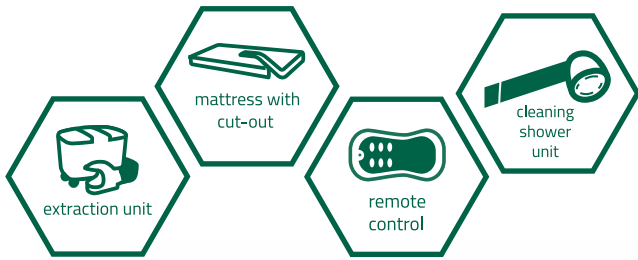

Through the process of automatic waste collection and multiple air purification Solaticare eliminates any unpleasant odours and decreases the risk of infection from air pollution.

It largely eliminates the need for toilet paper, diapers and towels and greatly reduces the need for frequent changes of the patient's bed clothes and sheets. It increases the patient's personal comfort and sense of dignity and reduces the need for excessive handling of the patient by the attendant. It also greatly reduces the attendants' contact with the patient and time spent on changing soiled garments and bed linen.

The result is a significant improvement in the standard of care and comfort of patients and immobile and elderly people. It greatly reduces the time spent by attendants on the most disliked and disagreeable aspect of their duties whilst offering considerable savings in terms of both time and cost.

Option 1 – Home care bed with special mattress

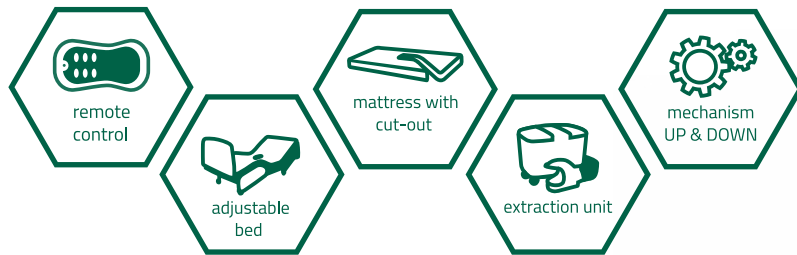

This option includes **an extraction unit** and **a mattress with cut-out**. The major feature of the extraction unit is the cut-out in the mattress which does not affect its functionality or comfort. It is possible to install Solaticare on any existing bed without interfering with the bed's structure. This feature can be utilized in both home care and nursing facilities.

Option 2 – Adjustable hospital bed with special mattress

This option consists of a bed and special mattress with an oval cut-out. A mechanized operating platform is situated under the bed which moves the head of the suction unit up into place by remote control when required. When the patient is cleaned and dried **automatically**, and all **cleaning** tasks are completed, the mechanism cleverly lowers the suction unit underneath the bed and out of the way of the patient.

The fully adjustable bed is designed for hospital facilities and is equipped with moveable sides which ensure greater patient safety and provide support when standing up.
